Adtex Multi Function Call Points

The AX-503 Multi Function Call Point series are a line of call points that are flush wall-mounted and are available with an optional pendant socket and out of bed socket. A call is activated by pressing the call button on the call point or on an optional plug-in call pendant.

The call points are available in a range of standard colours and labels to coincide with various alarm priority levels.

The pendant socket incorporates a selectable “pendant removed” alarm. This activates a call when the pendant is unplugged, allowing staff to ensure that your patient always has a nurse call button available. Additionally there is the Out Of Bed “OOB” feature available with the optional OOB socket making this multi function call point ideal for most applications.

The Pendant is perfect for users who may find themselves in vulnerable situations. It is small and easy to use .

Key Benefits

- Anti-bacterial silicone buttons
- Surface-mount PCB for reliable and consistent operation
- Easy to install
