ELECTRICAL & MECHANICAL SUPPORT SYSTEMS

Metal Framing • Pipe Supports • Fittings, Nuts & Hardware • Cable Trays and Cable ladders

A BRAND OF

UNISTRUT®

A BRAND OF **A**atkore
INTERNATIONAL

Unistrut is the original metal framing system featuring a unique weldless connection. The Unistrut system eliminates welding and drilling, and is easily adjustable and reusable for infinite configurations. Over time, our brand has evolved from a simple connection concept to a comprehensive engineered building and support system featuring a robust line of channels, fittings, fasteners, hangers, pipe clamps, cable trays and cable ladders. Backed by our worldwide network of engineering and distribution centers, we provide customers with total-resource capability, making Unistrut the brand everyone asks for by name.

Cable Support Systems

Cable Ladder – Pages 8 thru 31

NEMA CABLE LADDER [GENERAL INFORMATION]

Unistrut manufactures and markets the largest range of cable ladder systems for the Australian Electrical Industry. This extensive range of cable ladder support systems include a comprehensive range of steel and aluminium cable ladders load rated to NEMA Standard VE1. Steel cable ladders can be manufactured to side-rail in or side-rail out configuration depending on the project requirements.

In cases where extremely high corrosion resistance is required, stainless steel cable ladder systems are available against special order. All Unistrut Cable Ladder systems are complemented with a complete range of accessories: Horizontal Bends, Internal and External Risers, Tees, Crosses, Reducers, Hinged Horizontal and Vertical Splices, Adjustable Risers, Covers, Divider Strip, Adjustable Cantilever Support Brackets and Cable Clamps.

NEMA 12B - Steel

Length: 4m & 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 44mm

NEMA 16A - Steel

Length: 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 72mm

NEMA 20B - Steel

Length: 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 109mm

NEMA 20C - Steel

Length: 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 125mm

NEMA 12A - Aluminium

Length: 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 67mm

NEMA 20A - Aluminium

Length: 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 96mm

NEMA 20C - Aluminium

Length: 6m
Width: 150, 300, 450, 600mm
Cable Laying Depth: 125mm

The following notes are presented in order to assist users to achieve maximum economy and convenience with the installation of cable support systems. As each application will have its own particular conditions and requirements it is recommended that the services of Unistrut sales personnel and engineering team be engaged, especially in the early stages of any major project, so that the best overall result can be achieved.

Standard Sizes

Standard ladder widths are 150mm, 300mm, 450mm and 600mm, being the inside dimension between side-rails and is the maximum width available for carrying cables. Straight lengths are 6m long. Standard rung spacing on all systems is 300mm nominal.

Each of the Unistrut systems includes a full range of standard accessories, with a nominal radius of 300mm, 450mm and 600mm, depending on the system load class. Non-standard ladder widths and accessory radii can be manufactured against order.

Load Capacity

- a) **Cable Load** – Because the cable density remains fairly constant in a total installation, the widest ladders carry the most load, and each smaller width carries proportionately less load. However, the load carrying capacity of any class of ladder is independent of the width.

For details on how safe working loads are determined, refer to the NEMA VE 1 Standard and to the published load graphs for allowable loads of each ladder type.

- b) **Fixed Ladder Spans** – It is commonly found that the building structure supporting the cable ladders will dictate the span, but it is still possible to exercise some choice. Where the cabling is heaviest, and this is not usually extensive, it is possible to use (say) two 300mm wide ladders side by side instead of one 600mm wide, in order to select a lighter category of ladder for the total project. It is often inconvenient to use more than one ladder category in the same installation.

- c) **Varying the Spans** – Where the structure does not dictate the ladder span, the heaviest cable runs could be supported more frequently, again enabling a lighter category of ladder to be chosen.

Cable Laying Depth

Each of the Unistrut Cable Ladder and Tray Systems has a different cable laying depth. It is a general rule that the shallower the ladder, the lower the cost per metre and the more frequently it needs support. It is sometimes found that the lightest, most economical ladders are excluded from consideration solely because a particular minimum cable laying depth is required and has been specified accordingly.

Deflection

Cable ladders are essentially structural members designed to strength requirements only and are required to support pliable load elements. Therefore, the control of deflection is not necessary for durability or stability reasons and can probably only be justified on purely aesthetic grounds. If normally accepted deflection limits such as 1/360th of span are imposed, the resultant cable ladder will be grossly over designed and correspondingly expensive.

There may still be locations where the designer wishes to limit visual deflection. For example, prestige areas which may be open to public view or where the ladder is installed at eye level and deflection is accentuated. If these conditions exist, it is recommended that closer support spacings be used only in those important locations (to control visual deflection) and normal support spacings elsewhere (for economy). A maximum of 1/180th of span, when deflection is determined from the graphs published in this catalogue, should prove a satisfactory limit for visual deflection.

Otherwise, wherever overall economy is the principal consideration, no limits should be placed on deflection. This does not mean that deflection will be excessive but simply that a typically acceptable installation will result and optimum economy will be attained.

Material Selection

Often the most difficult decision to be made is the selection of material, because it involves the most cost-sensitive of compromises. Material choice is directly related to service life and the longer the required life the more expensive will be the materials. The cost of these materials also must be considered as an equation of initial investment versus maintenance costs and eventual replacement.

Because service conditions for cable ladders can vary over an enormously wide range, even within a single installation, it is impossible to write down any hard and fast rules on the subject of corrosion and expected lifespan. The following may be considered a guide as to what can be expected from the various materials and finishes currently available for cable support systems.

- a) **Galvanised Steel** – Hot-dipped galvanised steel (after fabrication) is a common selection, as it is economical to purchase and suitable for most conditions of outdoor exposure. For indoor applications, or anywhere that is essentially free from moisture, galvanised ladders can be considered to have an indefinite life. That is, they should last as long as the plant, building, cabling or equipment which they service.

On a typical industrial or processing plant installation, exposed to weather, moisture and airborne industrial pollution, a basic life of approximately ten years can be expected. This is not to say that the ladder will be completely corroded in that time but it is the probable life of the corrosion protection finish. Beyond that time, rapid decay can be expected and maintenance costs will increase substantially in order to keep the ladders serviceable.

The ten year life quoted here should be adjusted up or down depending on the circumstances. For example, if installed near the coast, the effect of salt laden air may shorten the expected life. Also galvanising is sensitive to some chemicals, especially sulphurous compounds, which may be intrinsic to plant operations where the ladder is installed. Correspondingly, a longer life will be expected in lighter industrial situations and if drier conditions exist.

- b) **Aluminium** – Aluminium is also a popular choice of material for cable ladders. Most frequently it is selected because of its excellent performance in marine environments such as is found on wharves, coal loaders or similar Port Facilities where salt spray or salt laden atmosphere is present. Another reason for using aluminium is that it offers a long maintenance free life which is important in cases where access for future painting or repairs may be costly and difficult.

For any given load class or capacity, aluminium cable ladders are more expensive than their galvanised steel counterparts. Aluminium ladders can also be expected to have a greater deflection than an equivalent steel system. On the other hand, they are lighter, more readily handled and are easy to work with, resulting in faster installation and therefore lower installation cost.

Aluminium cable ladders can be expected to have a lifespan well in excess of twenty years in most industrial or marine applications. The exception would be in the case of a local concentration of chemicals which are detrimental to aluminium. Alkaline compounds or fumes is a common example but if any doubt exists, the advice of aluminium suppliers should be sought.

c) Powder Coating or Paint Systems:

1. Coating on bare steel.

Painting over bare steel is not generally recommended for cable ladders. This comment applies to virtually all types of 'organic' or non-metallic coatings such as powder coatings, polyesters, PVC or nylon. Although these coatings are resistant to a wide variety of chemicals, their effectiveness on cable ladders can be limited. The non-sacrificial nature of paint films means that anywhere the coating is broken, corrosion is permitted to obtain a foot-hold. It is then able to spread rapidly underneath the paint, lifting it off and allowing corrosion to progress even further.

If it is decided to use a paint or powder coating on bare steel, then before commissioning, a compatible repair paint should be used to make good any places on the ladder installation that may have been damaged during erection.

2. Coating over Galvanised Steel or Aluminium

Application of paint systems over either of the above materials is obviously a more expensive approach, but in some circumstances it is the only answer. If ladders are installed in close proximity to acid tanks, process vats, steam pipes or similar situations, there may be no metallic finish capable of giving satisfactory service life. This can be overcome by the application of a suitable paint or powder coating over galvanised or aluminium base materials. Naturally, in order to contain costs, the additional finish need only be applied to those sections of the work which are effectively exposed to the corrosive fumes.

- d) **Stainless Steel** – Stainless Steel is sometimes considered as a material for cable ladders, usually where extremely high corrosion resistance, coupled with difficulty of servicing after installation and a high degree of reliability are essential requirements. An off-shore oil drilling platform may be one example where these conditions exist.

The NEMA Standards

NEMA STANDARD No. VE 1 is published by the National Electrical Manufacturers Association in the U.S.A. The Standard provides for the technical requirements of construction, performance and testing of cable tray systems. It is regularly revised by the Association in order to keep pace with technology and the ever changing requirements of the manufacturers, contractors, consultants and other users throughout the electrical industry.

There is presently no Australian Standard governing cable support systems. Despite the existence of other versions from places such as Canada and Europe, the NEMA VE 1 is by far the most widely accepted and the best known Standard for cable supports in Australia. In recognition of this situation, and in order to produce cable ladders of known quality and load capacity, Unistrut has adopted a policy of constructing and rating its cable support products in accordance with the VE 1 Standard wherever possible. This policy is reflected in the name and various class designation numbers now used by Unistrut which are drawn directly from the Standard. For example NEMA Class 12B, 16A, 20B or 20C. Please note that in most cases Unistrut ladders exceed the minimum strength requirements of each ladder class and therefore the published load graphs should be consulted in order to find the actual safe load capacity for each ladder type.

The more important aspects of the NEMA Standard VE 1 which are relevant to Unistrut products are described as follows:

1. Load Capacity and Safety Factor

Safe working loads are required to be determined as a result of testing a series of sample ladders. Tests must be conducted as simple spans (ie the worst case for loading) and over various span lengths with a safety factor of 1.5 against the collapse load of the ladder. In this way, loads are based on average performance of a number of samples and not just a single test or some calculations. The Standard does not permit working loads to be determined by calculation because it has proven to be too unreliable. Cable ladders are specialist products which are unconventional in the structural sense. That is, they have an unusual combination of slenderness, local buckling of thin material and overall lateral restraint elements which are not satisfactorily interpreted by normal design methods.

2. Deflection

The NEMA Standard VE 1 does not specify any limitation on the deflection of cable support members. To do so, would inevitably result in an over-designed (and hence uneconomical) system. For further information on deflection please refer to notes under Guidelines for Ladder Selection.

3. Electrical Continuity

The electrical resistance of connections is limited to a maximum of 330 micro-ohms. Representative samples of Unistrut splice joints (both steel and aluminium) as well as the rung to side-rail joint in aluminium ladders have been tested by an Independent Electrical Laboratory, and in all cases were found to comply with the NEMA Standard VE 1 specification.

Explanation of NEMA VE 1 load/span class designations

The NEMA VE 1 rating method is based on the Imperial system of measurement, as follows:

1. The numerals indicate the ladder span in feet.

8	=	8ft (2.4m)
12	=	12ft (3.6m)
16	=	16ft (4.8m)
20	=	20ft (6.0m)

2. The letter indicates the working load category.

A	=	50lbs/lin.ft (75kg/m)
B	=	75lbs/lin.ft (112kg/m)
C	=	100lbs/lin.ft (149kg/m)

Example: A 20B class ladder requires a minimum safe working load of 75 lb/ft. over a 20ft.span. (ie.112kg/m over a 6.0m span)

Steel Cable Ladder (SCL)

Galvanised steel cable ladders are the most popular format for cable support systems as they afford a good combination of cost, strength and service life. Unistrut manufactures a complete range of NEMA Steel Cable Ladder systems. These provide a wide range of load and span combinations to suit the requirement of almost any installations.

Side-Rail Alternative - With the exception of Nema 12B, all ladder systems are available with the side-rails turned outward (as standard), or inward (RI) to meet varying client specifications.

All ladder systems are load rated to NEMA Standard VE 1.

Stainless Steel - In cases where extremely high corrosion resistance is required, stainless steel cable ladder may be the only solution. All steel cable ladder systems are available in stainless steel on special order only. For load and deflection calculations, contact your local Unistrut Service Centre.

Splice Plates

16A, 20B and 20C Systems - Unistrut steel splice plates are of a robust and practical design. The neat fitting flanges and bolted configuration of Unistrut splices also reduces deflection at joints as the ladder is loaded. Unsightly dips or discontinuities along the ladder run are therefore avoided. Bolt holes in splice plates and ladder side-rails are elongated so that site misalignments as well as thermal expansion and contraction are catered for.

12B Systems - The 12B splice plate incorporates virtually all of the working features as described for the 16A, 20B and 20C ladders, but because the 12B is a lighter duty system, a simplified splice design is used. Requiring only two fixing bolts and eliminating the need for matching holes in the side-rail, the 12B splice plate is convenient in use and extremely fast to install.

Notes - *Electrical resistance across splice joints is less than the 330 micro-ohms limit specified by NEMA Standard VE 1. To attain maximum working load of the system, the following recommendations should be adopted.*

- Do not splice single spans of ladder.
- Avoid splice joints in the vicinity of the end supports on continuous runs.
- Avoid splice joints directly over intermediate supports on continuous runs.
- Locate splice joints at the quarter span point between supports on continuous runs.

If in doubt, please consult your Unistrut Service Centre.

Accessories – All Unistrut steel cable ladder systems are complemented by a full range of standardised fabricated accessories and fittings which are readily available. All are of a welded construction.

Built-in Splice - The principal feature of all Unistrut cable ladder accessories is the 'built-in' splice plate. A shaped extension of the accessory side-rail permits direct connection to the straight ladder eliminating the need for a separate splice component. The advantages of this method are:

- Minimised fixing hardware and components.
- When joining to a cut ladder, the accessory end acts as a convenient drill template for bolt holes.
- Simplifies pre-planning, quantity take-offs and ordering.
- No left-over components.
- Strong and rigid joint.
- Faster installation.

Accessories are attached with the same fasteners as used for straight splice plates. Threaded fasteners are hot dipped galvanised.

Elongated slots allow easier fit-up and permit adjustments in alignment to be absorbed.

Construction

Unistrut steel cable ladders are manufactured from steel to AS/NZS1594 "Hot-Rolled Steel Flat Products" which are cold roll formed to the desired shape. The roll forming process improves the mechanical properties of the metal whilst the special lipped channel section is designed to give the best possible combination of strength-to-weight, lateral rigidity and low deflection. The rungs are fillet welded to the side-rails which further improves the overall stability as well as strength of the finished product. The rung joint is so designed that galvanising can be effected to all areas.

Ladders, accessories and other galvanised components are hot-dipped galvanised to AS/NZS 4680 / BS EN ISO 1461:2009, after fabrication.

NEMA 12B Straight Tray [HG]

Cable Laying Depth: 44mm

Loading Data:

Basic Load Capacity
112kg/lin.m on 3.6m span

Length: 4m & 6m

Rung Spacing: 300mm nominal

Standard Finish: Hot Dipped Galvanised

Also available in Stainless Steel
(3m length, part no. LUE)

Dim "W"	Type	Part No.	
		4m	6m
150	12B	LEE101	LEE1016
300	12B	LEE103	LEE1036
450	12B	LEE104	LEE1046
600	12B	LEE106	LEE1066

• Splice plate & fixing screws are not included (order separately).

Allowable Load Graph

Allowable loads are determined generally in accordance with NEMA Standard VE1 and verified by testing.
Safety Factor = 1.5 on collapse load for single span.

Deflection Graph

Deflections shown apply to the end-bays (ie. worst case) of a continuous ladder run. To find deflection of a single span, multiply by 2.5.

NEMA 16A STEEL CABLE LADDER

NEMA 16A Straight Tray [HG]

Cable Support Systems

NEMA Cable Ladder

Cable Laying Depth: 72mm

Loading Data:

Basic Load Capacity
90kg/lin.m on 4.8m span
79kg/lin.m on 6m span

Length: 6m

Rung Spacing: 300mm nominal

Standard Finish: Hot Dipped Galvanised

Reducer Splice [HG]

Reduction of ladder width is normally carried out using straight or offset reducers. Reducer Splice Plates are a flexible, cost effective alternative which bolt directly to the ladder side-rails.

Available for all steel cable ladder systems.

Type	Width "W"	Height "H"	Part No.

Splice Plate [HG]

Type	Part No.
12B	LEE30
16A	LEG30
20B	LEK30
20C	LEL30

The neat fitting flanges and bolted configuration of Unistrut splice plates also reduces deflection at joints as the ladder is loaded. Unsightly dips or discontinuities along the ladder run are therefore avoided. Bolt holes in splice plates and ladder side-rails are elongated so that site misalignments as well as thermal expansion and contraction are catered for.

Fastener Quantities for Accessories

Hinged Horizontal Splice Plate [HG]

Steel Cable Ladder Accessories			
12B	Splice Screw (HG)	LEE42	4 per Bend, Riser or Reducer 6 per Tee 8 per Cross
16A, 16A-RI, 20B, 20B-RI	Splice Screw (HG) Splice Nut (HG)	LEG40 LEG41	8 per Bend, Riser or Reducer 12 per Tee 16 per Cross
20C, 20C-RI	Splice Screw (HG) Splice Nut (HG)	LEG40 LEG41	16 per Bend, Riser or Reducer 24 per Tee 32 per Cross

Type	Part No.
12B	LEE35
16A	LEG35
20B	LEK35
20C	LEL35

A fast and economical method of changing ladder direction where exact site dimensions must be met. Especially suitable where the angle is less than 45°, or larger angles where the cable bending radius is not important. Also provides a flexible alternative to standard accessory sizes and radii. Suits all Unistrut steel cable ladder systems.

• Fixing Hardware for all cable ladder systems must be ordered separately.

NEMA STEEL CABLE LADDER ACCESSORIES

Hinged Vertical Splice Plate [HG]

Ideal for making changes in vertical level or direction. Easily adapts to exact site dimensions which may otherwise be difficult to achieve with fixed risers. Cables form their own bending radius spanning between adjacent end-rungs. Also used to form adjustable risers providing flexibility to adjust to any site restrictions.

Type	Part No.
12B	LEE36
16A	LEG36
20B	LEK36
20C	LEL36

Hold Down Brackets [HG]

Hold Down Brackets provide rigid clamping for all steel cable ladder systems. The Brackets can be positioned at any point along the ladder length.

Type	Part No.

Ordered Separately

Divider Strip [GB/HG]

Used to separate cables of different voltages or circuits. The notched base permits forming to the required shape. Fix at 1m centres.

Type	Part No.	Height "H"
12B	LEE55	37mm
16A	LEM55	70mm
20B	LEM55	70mm
20C	LEM55	70mm

Aluminium Cable Ladder (ACL)

Wherever severe corrosion conditions are present, or a long maintenance free life is required, Unistrut aluminium cable ladder systems are the obvious choice.

Unistrut manufactures a complete range of NEMA Aluminium cable ladder systems. These provide a wide range of load and span combinations to suit the requirements of almost any installation.

Most frequently, aluminium cable ladders are selected because of their excellent performance in marine environments where salt spray or salt laden atmosphere is present. Applications such as wharves, coal loader conveyors or similar port facilities as well as coal mines, smelters, chemical processing plants and refineries are all typical users of aluminium cable ladders.

Splice Plates

The unique Unistrut aluminium system splice plate is close fitting and shaped so that it is retained neatly and firmly between mating flanges incorporated in the ladder side-rails. Initial deflection or “take-up” of the joint under load is thereby minimised, resulting in a tidy and rigid installation, free from excessive sag at splice points.

The splice design also permits up to 20mm of expansion and contraction movement at each joint – an important consideration with aluminium cable ladders – eliminates the need to place special expansion splices at predetermined intervals. The installation procedure for the splice connection is fast and simple.

Notes

- To attain maximum working load of the system, the following recommendations should be adopted:
 - Do not splice single spans of ladder.
 - Avoid splice joints in the vicinity of the end supports on continuous runs.
 - Avoid splice joints directly over intermediate supports on continuous runs.
 - Locate splice joints at the quarter span point between supports on continuous runs.
- If in doubt, please consult your Unistrut Service Centre.

Accessories

All aluminium cable ladder systems are complemented by a full range of standardised fabricated accessories & fittings which are readily available.

Built-in Splice

The principal feature of all Unistrut cable ladder accessories is the ‘built-in’ plate. A shaped extension of the accessory side-rail permits direct connection to the straight ladder, eliminating the need for a separate splice component. The advantages of this method are:

- Minimised fixing hardware and components.
- When joining to a cut ladder, the accessory end acts as a convenient drill template for bolt holes.
- Simplified pre-planning, quantity take-offs and ordering.
- No left-over components.
- Strong and rigid joint.
- Faster installation.

Accessories are attached with the same fasteners as used for straight splice plates.

Elongated slots allow easier fit-up and permit adjustments in alignment to be absorbed.

Hold-Down Brackets

The general purpose hold-down bracket can be positioned at any point along ladder length, even in the situation where a rung and support member coincide. The bracket provides a large bearing area for the side-rail and permits free expansion movement to occur.

For side mounted ladders, or where rigid fixing of ladder is required, the rigid clamping bracket can be used.

Construction

Unistrut aluminium cable ladder systems are manufactured from high strength alloy 6106-T6 for all extruded components and 5005 for sheet or plate components. These alloys are suitable for marine applications and offer excellent all round corrosion resistance. All fasteners are made from 300 series grade of stainless steel for optimum corrosion resistance.

Each rung on 12A, 20A and 20C is attached to the side-rails with four stainless steel screws. In both assembly methods rung ends are held captive between flanges extruded into the side-rail, resulting in a strong and reliable connection.

C.K.D. Feature

Aluminium cable ladders with screwed rungs are also available in C.K.D. (completely knocked down) which provides a particular advantage when on-site assembly is necessary and in freight savings for remote areas.

NEMA 12A ALUMINUM CABLE LADDER

NEMA ALUMINUM CABLE LADDER – ACCESSORIES

Splice Plate

12A, 20A, 20C Splice Plate

Type	Part No.	Pairs of Splice Nuts and Splice Screws Required
12A	LAD30	2 Pairs of LAD42/LAD41
20A	LAH30	2 Pairs of LAD42/LAD41
20C	LAL30	4 Pairs of LAL42/LAL41

The unique Unistrut aluminium splice plate is close fitting and shaped so that it is retained neatly and firmly between mating flanges incorporated in the ladder-side rails.

General Hold Down Bracket

HHS1225SS Hold Down Bracket Screw

P1013SS Hold Down Bracket Nut
Ordered Separately

Type	Part No.
12A, 20A	LAD50
20C	LAL50

Rigid Hold Down Bracket

HHS1230SS Hold Down Bracket Screw

P1013SS Hold Down Bracket Nut
Ordered Separately

Type	Part No.
All Aluminium Systems	LAM50AL

General purpose hold-down bracket can be positioned at any point along ladder length, even in the situation where a rung and support member coincide. The bracket provides a large bearing area for the side-rail and permits free expansion movement to occur. For side mounted ladders, or where rigid fixing of ladder is required, the rigid clamping bracket can be used.

Hinged Horizontal Splice

Type	Part No.
12A	LAD35
20A	LAH35
20C	LAL35

A fast and economical method of changing ladder direction where exact site dimensions must be met. Especially suitable where the angle is less than 45°, or larger angles where the cable bending radius is not important. Also provides a flexible alternative to standard accessory sizes and radii. Suits all Unistrut aluminium cable ladder systems.

Hinged Vertical Splice

Type	Part No.
12A	LAD36
20A	LAH36
20C	LAL36

Ideal for making changes in vertical level or direction. Easily adapts to exact site dimensions which may otherwise be difficult to achieve with fixed risers. Cables form their own bending radius spanning between adjacent end-rungs. Also used to form adjustable risers providing flexibility to adjust to any site restrictions.

Reducer Splice

Type	Width (mm)	Part No.
12A	75W	LAD380
12A	150W	LAD381
12A	300W	LAD383
20A	75W	LAH380
20A	150W	LAH381
20A	300W	LAH383
20C	75W	LAL380
20C	150W	LAL381
20C	300W	LAL383

Reduction of ladder width is normally carried out using straight or offset reducers. Reducer splice plates are a flexible, cost effective alternative which bolt directly to the ladder side-rails. Available for all aluminium cable ladder systems.

• Fixing Hardware for all cable ladder systems must be ordered separately.

Divider Strip

Type	Part No.
All Aluminium Systems	LAM55

Divider Strip is used to separate cables of different voltages or circuits. The notched base permits forming to the required shape.

Interface Spacer

Type	Part No.
PVC White	LAM54
PVC Black	LAM54UV

Used to separate cable ladder and supports in corrosive environments.

Ladder Covers

Covers are normally specified where protection is required:

1. To safeguard against damage to cables and insulation from falling objects - dropped tools, discarded cigarettes, sparks or solid materials.
2. Covers protect cable insulation and fixings (plastic ties etc.) from harmful effects of ultra-violet light and/or weathering deterioration.
3. In areas where high levels of airborne particles are present, covers prevent accumulation of dust or other debris on cables which may cause heat build up, fire hazards or absorb moisture, which may shorten the life of the installation.

Availability

Standard flat covers are available for all Unistrut cable ladder systems. Standard length is 3 metres. Straight, peaked or ventilated covers are available to special order.

Material

Steel Systems: Galvabond, hot-dip galvanised steel sheet to AS1397.

Aluminium Systems: Aluminium Alloy 5005. Suitable for marine applications and compatible with the 6106-T6 alloy used in ladders.

Standard Cover

The most common type used because they afford maximum protection to cables at the lowest cost.

Alum. Covers - Standard

Type	Nominal Width	Width "W"	Part No.
12A/20A/20C	150	154	LAM6013
12A/20A/20C	300	304	LAM6033
12A/20A/20C	450	454	LAM6043
12A/20A/20C	600	604	LAM6063

Steel Covers - Standard

Type	Nominal Width	Width "W"	Part No.
12B	150	176	LEE6013
12B	300	326	LEE6033
12B	450	476	LEE6043
12B	600	626	LEE6063

20B-RI/20C-RI	300	304	LEM6033
20B-RI/20C-RI	450	454	LEM6043
20B-RI/20C-RI	600	604	LEM6063

Peaked Cover

Used in very dusty situations where the self-cleaning effect of sloping sides prevents excessive dust accumulations. The larger air-space above the cables also assists with the dissipation of heat.

Ventilated Cover

Should be used wherever reasonable protection for cables is required and where there is also a primary requirement to allow for the escape of heat generated by cables.

NEMA STEEL & ALUMINUM CABLE LADDER COVERS

Cable Ladder Cover Fixings

Covers are retained in position by means of cover clips as illustrated. Manufactured from high strength stainless steel, these unique clips, which have no thread components to freeze up, are very quickly installed and are also easily removed or replaced at a later date.

One size of clip for each ladder system suits both straight and accessory covers.

Recommended Spacing For Cover Clips

Service conditions	Design Wind velocity, Vz (AS1170)	Ladder Width, mm			
		600	450	300	150
Up to and including exposed external locations	50m/s	1.2m	1.2m	1.2m	1.2m
Cyclonic Areas	65m/s	0.6m	0.8m	1.2m	1.2m

20C	LEL90

SS Clips For Aluminum Covers

Type	Part No.
12A	LAD90
16A	LAH90
20C	LAL90

Accessory Covers

Flat Covers are available to match shaped accessories of all Unistrut Cable Ladder Systems, in both steel and aluminium. Materials are the same as for straight covers.

Note: Flat covers are available to match accessories of all Unistrut NEMA Cable Ladders in both steel and aluminium material and are the same as for the straight covers.

Cover Straps [HG]

Type	Ladder Width	Part No.
16A	150	LEG931
16A	300	LEG933
16A	450	LEG934

20B	450	LEK934
20B	600	LEK936

Hook Bolt & Wing Nut [MG]

Note: Two pair of hook bolts and wing nuts are used to attached the Cover Straps. Hook bolt and wing nut sold separately.

Part No.	Description
LEK8873MG	Hook Bolt
WN10MG	Wing Nut M10

Accessories for all Unistrut cable ladder systems are available in the four standard widths - 150, 300, 450 or 600mm.

System	Std. Radius
12B SCL and 12A ACL	300mm
16A SCL and 20A ACL	450mm
20B, 20C SCL and 20C ACL	600mm

Fixed bends and Internal or External Risers are readily available with a 90° angle. Other angles (30°, 45° or 60°) and other radii (300, 450, 600 or 900mm) can be supplied on special request. The radii also applies to Tees and Crosses.

All support locations below are in accordance with NEMA standard VE 1.

Tees & Crosses

For smaller radius accessories and / or lightly loaded ladders, the support methods shown may be reduced or even eliminated.

This is best determined at the point of installation or consult your local Unistrut Service Centre.

Risers & Bends

For narrower ladders and smaller angles, the bend centre support may be deleted.

Straight or Offset Reducers

Straight Reducer plus left and right hand offset reducers are available for all Unistrut Cable Ladder systems.

Major Width: Wa 300, 450, 600, 450, 600, 600

Minor Width: Wb 150, 150, 150, 300, 300, 450

Reducer splice plates are also available for all ladder systems.

RITEWAY CABLE TRAY AND SUPATRAY

Unistrut Australia manufacture a range of Cable Trays in a variety of materials as detailed in the individual catalogue pages:

Riteway Cable Tray [12mm high square side]

ST3 Supatray [50mm high square side]

ST5 Supatray [75mm high square side]

The selection of a Cable Tray System for a particular application depends on FOUR main factors:

1. Environment conditions - the working environment of the Cable Tray System determines the choice of material used to manufacture the Cable Tray. Unistrut has the capability of manufacturing Cable Trays in several different materials to suit different environments as follows: Galvabond; Hot Dipped Galvanised to AS/NZS 4680; Aluminium; 316 Grade Stainless Steel (Riteway tray only).
2. Physical size and quantity of cables - smaller diameter cables do not require the same strength of support but they do not have any rigidity to support themselves and therefore require a more continuous support platform. A large quantity of smaller diameter cables would probably require a high sided cable tray in order to contain the sideways movement of the cables during laying.
3. Cable weight - The total maximum weight of the cables to be supported determines the choice of Tray Profile and Height in conjunction with the designated Support Span.
4. Support Span - The distance over which the Cable Tray has to support the nominated Total weight of cables determines the choice of tray Profile and Height.

Other Riteway Cable Trays (made to order)

Unistrut has the capability to manufacture other Riteway Cable Tray profiles and perforation configuration to suit a variety of application and uses.

Cable tray can be manufactured up to a Maximum width of 750mm in Standard Riteway Profile (12mm Square Edge) as a one piece unit. Wider Cable Trays could be manufactured in multiple units but a more practical approach would be to install two or more standard width cable trays alongside each other to make up the desired width.

Cable tray can be manufactured up to a maximum length of 3 meters in increments of 50mm or even down to lengths of less than meter (again in increments of 50mm).

Cable tray can be manufactured with a variety of side heights (not necessarily two equal side heights and in increments of 25mm) providing that the sum of the side heights and width does not exceed 750mm and that the width equals or exceeds the side height.

Riteway Tray

Features

12mm Square Edge. "Joggled" end on tray provides built in splice connection.

Punched slots accept 12.7mm wide cable tie.

Recommended joining hardware is:

M6 x 8 Gutter Bolt and M6 Flange Nut.

Standard Length: 2.4m

Standard Finish: Galvabond.

Also available in: Hot dipped galvanised, Aluminium, Powder coated, 304 & 316 Stainless Steel.

Nominated Standard Widths:

75, 100, 150, 200, 300, 450 and 600mm.

Load Data

Tray width (mm)	Span Metres				
	1.0	1.2	1.5	2.0	2.4

ST3 Supatray [GB/HG]**Features**

50mm high side. Rapid on-site fabrication of accessories.

Recommended joining hardware is:

TU940 Nut and Bolt Pack (40/pkt).

Standard Length: 3m

Standard Finish: Galvabond.

Also available in: Hot dipped Galvanised, Aluminium, Powder Coated.

Nominal Standard Widths:

150, 300, 450 and 600mm.

Load carrying capacities of standard galvabond ST3 Supatray:

140kg/lin. metre over 1.5m span

36kg/lin. metre over 3m span.

Description	Part No.
ST3-150-GB	AUG2A315

ST5 Supatray [GB/HG]**Features**

75mm high side. Rapid on-site fabrication of accessories.

Recommended joining hardware is:

TU940 Nut and Bolt Pack (40/pkt).

Standard Length: 3m

Standard Finish: Galvabond.

Also available in: Hot dipped Galvanised, Aluminium, Powder Coated.

Nominal Standard Widths:

150, 300, 450 and 600mm.

Load carrying capacities of standard galvabond ST5 Supatray:

300kg/lin. metre over 1.5m span

80kg/lin. metre over 3m span.

SUPATRAY ACCESSORIES

Bendside

Create bends of varying degrees.

Description	Finish	Part No.	Finish	Part No.
ST3 Bendside	GB	AUG2BS3	HG	AUH2BS3
ST5 Bendside	GB	AUG5BS3	HG	AUH5BS3

T-X Bracket

Intersect and change direction of cable tray by creating either a tee or cross section.

Description	Finish	Part No.	Finish	Part No.
ST3 T-X Bracket	GB	AUG2BTX	HG	AUH2BTX
ST5 T-X Bracket	GB	AUG5BTX	HG	AUH5BTX

Link Plate

Join and vary the angle of the cable tray.
Create internal and external risers to run cable tray vertically.

Description	Finish	Part No.	Finish	Part No.
ST3 Link Plate	GB	AUG2PLK	HG	AUH2PLK
ST5 Link Plate	GB	AUG5PLK	HG	AUH5PLK

Splice Plate

Used to join tray sections together.

Description	Finish	Part No.	Finish	Part No.
ST3 Splice Plate	GB	AUG2PFH	HG	AUH2PFH
ST5 Splice Plate	GB	AUG5PFH	HG	AUH5PFH

Hold Down Bracket

Allow you to secure the cable tray to the Unistrut support system - cantilever brackets or trapeze hangers.

Description	Finish	Part No.	Finish	Part No.
ST3 Hold Down Bracket	GB	AUG2HDC	HG	AUH2HDC
ST5 Hold Down Bracket	GB	AUG5HDC	HG	AUH5HDC

Joining Hardware

Used to secure link plates, splice plates, bendsides and T-X brackets to the cable tray.

Description	Finish	Part No.	Finish	Part No.
ST3 Joining Hardware (40/pkt)	ZP	TU940	MG	TU940MG
ST5 Joining Hardware (40/pkt)	ZP	TU940	MG	TU940MG
ST3 Divider Strip - 3m long	GB	AUG2DS3	HG	AUH2DS3
ST5 Divider Strip - 3m long	GB	AUG5DS3	HG	AUH5DS3

Supatray Bend

Cut outside rails right through (3 full cuts make 90° bend).

Form bendside to suit and cut to length before fixing to tray with standard joining hardware.

Cut inside rails at top and bottom flanges only.

Supatray T-X Bracket

Note: Cross is same procedure repeated on the other side.

Cut side rail to bottom face in 2 places to suit tray width (flatten side down or cut off with snips).

Fix 2 T-X brackets to both trays using joining hardware.

Supatray External Riser

Cut both side rails down to bottom face.

Bend tray along bottom face and secure with link plates and joining hardware.

3 cuts in each rail make a 90° riser.

Link Plate

Supatray Internal Riser

Cut both side rails down to top face.

Bend tray along bottom face and secure with link plates and joining hardware.

3 cuts in each rail make a 90° riser.

TB – Light Duty Trapeze Bracket

Part No.	Designation	Actual Size
TB150	Trapeze Bracket for Supatray 150mm	225mm
TB300	Trapeze Bracket for Supatray 300mm	375mm
TB450	Trapeze Bracket for Supatray 450mm	525mm
TB600	Trapeze Bracket for Supatray 600mm	675mm

Product Description

ACROFIL® is a welded wire mesh cable management system produced from high strength steel wires. ACROFIL is produced by first welding a net, forming the channel, and then finishing. The 50mmX100mm wire spacing permits continuous airflow to help prevent heat buildup. In addition this unique open design prevents the buildup of dust, contaminants and bacterial proliferation.

ACROFIL is produced in standard 3m lengths and is supplied in 2 standard depths: 50 and 100mm.

ACROFIL is offered in nine different widths:

50 mm,	400mm,
100mm,	450mm,
150mm,	500mm,
200mm,	600mm
300mm.	

Special sizes are available to meet your unique requirements.

[Standard Finish] Zinc Plated (ZP) – (AS 1789)

Channel, fittings and components are electroplated generally in accordance with AS 1789.
Fasteners are electroplated generally in accordance with AS 1897.

Hot Dip Galvanised (HG) – (AS/NZS 4680)

Coatings are applied generally in accordance with AS/NZS 4680. The thickness of the coating is dependent on the material thickness of the component being galvanised. It should be noted that due to the galvanising process, the thickness of the coating will vary over the surface and should be taken into account during component assembly.
It may be necessary to remove excess build-up prior to use.

316 Type Stainless Steel (SS)

Corrosive resistant stainless steel with no additional surface treatment. This material option provides the best corrosion resistance available. Stainless steel is used primarily in marine environments or food processing facilities.

Other – Powder Coated (PC), Galvabond (GB), Plain (PL) and Grade 304 Stainless Steel (SS304).

When specific applications require other commercially available finishes, they can be supplied according to specification.

How To Order

Part numbers shown in the catalog are for the standard zinc plated finish.
For special order finishes, add the finish code as a suffix.

Example

AF50-300 is zinc plated.
AF50-300-SS is stainless steel type 316.

Masses and Dimensions

Masses given for all material are approximate shipping weights.
All dimensions subject to commercial tolerance variations.

Self-Splicing Straight Lengths

ACROFIL's exclusive autolock splicing system makes connecting ACROFIL fast and simple. The Autolock, or self splicing bars which come pre-installed on ACROFIL systems, eliminates the need for a typical nut and bolt type connection. For proper grounding of ACROFIL please refer to page 66.

ACROFIL Assembly - AF50, AF100, & AF150

Step 1 Align the trays as shown.

Step 2 While raising the rear edge of the male connection, slide the tray forward, but do not engage the locking clip.

Step 3 Push the rear locking clip over the back edge of the tray.

Step 4 Slide the tray forward to engage both front and rear locking clips.

Accessory Assembly

Many of the ACROFIL wire basket accessories feature the unique autolock. Just slide the tray under the tabs and then push down to engage the autolock. No tools, bending, or attachments are required for a secure connection.

For accessories which use the tab lock, the tray is secured by using a screw driver to gently bend one of the tabs down over the tray.

ACROFIL® – DOUBLE ROD REINFORCED TRAY (50MM DEPTH)

Double Rod Reinforced Tray [50mm Depth] [AF50-{W}]

- Double rod reinforced tray has a 50mm cable laying depth
- Standard length of tray is 3m
- Standard finish is zinc plated
- No hardware is necessary to connect straight sections
- For continuous grounding use AF-GCLIP
(See page 66.)

Application Example

Part Description		Width Nominal (mm)	Depth (mm)	Wt. (kg) (piece)	Loading (kg/m)		
					1.5m Span	2.0m Span	2.5m Span
	AF50-50	50	50	1.9	25.1	17.8	13.1
	AF50-100	100	50	2.6	34.2	23.3	17.2
	AF50-150	150	50	3.6	56.3	36.6	27.8
	AF50-200	200	50	4.2	58.7	39.2	29.8
	AF50-300	300	50	5.5	64.0	39.3	29.0
	AF50-400	400	50	8.1	89.4	49.4	36.5
	AF50-450	450	50	8.8	97.5	53.9	39.8
	AF50-500	500	50	9.5	105.4	63.0	46.5
	AF50-600	600	50	10.8	114.9	68.7	50.7

Load Values are determined by IEC61537 testing. Copies of load tests available upon request.

Safety Factor 1.7

ACROFIL® – TRIPLE ROD REINFORCED TRAY (100MM DEPTH)

Triple Rod Reinforced Tray (100mm Depth) [AF100-{W}]

- Triple rod reinforced tray has a 100mm cable laying depth
- Standard length of tray is 3m
- Standard finish is zinc plated
- No hardware is necessary to connect straight sections
- For continuous grounding use AF-GCLIP
(See page 66.)

Part Description		Width Nominal (mm)	Depth (mm)	Wt. (kg) (piece)	Loading (kg/m)		
					2.0m Span	2.5m Span	3.0m Span
	AF100-100	100	100	4.2	69.6	54.2	41.2
	AF100-200	200	100	5.5	78.4	58.4	46.4
	AF100-300	300	100	8.1	109.9	85.0	67.4

	AF100-500	500	100	10.8	151.0	119.7	95.0
	AF100-600	600	100	17.6	164.6	130.5	103.6

Load Values are determined by IEC61537 testing. Copies of load tests available upon request.

Safety Factor 1.7

Other Products Available at Special Request

- Quadruple rod reinforced tray (150mm depth)
- Heavy duty cable tray
- Single rod tray available (30mm depth)

AF150
150MM DEPTH

AF30
30 MM DEPTH

Custom Made Tray Examples

AF-SPLICE

Weight: 0.13kg/each

- Splice bar connector is 19mm x 225mm long
- Standard finish is zinc plated
- Connect using AF-KITCH3 (sold separately)
- Bend 90° for use as an angle connector

NOTES:

1. Always place nut on outside of tray
2. For use with AF50, AF100 & AF150 tray
3. The splice connector is used connect remnant sections of tray cut from standard lengths and to field fabricate fittings.

**Bend & Intersection Bars****AF-TBAR1100**

Weight: 0.65/each

- AF-TBAR1100 connector is 19mm x 1100mm long
- Connect using AF-KITCH3 (sold separately)
- Bend 90° for use as an angle connector

AF-TBAR550

Weight: 0.32 kg/each

- AF-TBAR550 connector is 19mm x 550mm long
- Connect using AF-KITCH3 (sold separately)

NOTES:

1. Always place nut on outside of tray
2. For use with AF50, AF100 & AF150 tray
3. Used for tees which require a heavier support
4. These bars are normally cut to appropriate length

Connector Hardware Overview

Cable Support Systems

AF-KITCH1

AF-KITCH2

AF-KITCH3

AF-EG-CBN

Part Kit	Weight (kg)	NO./ PKG

Acrofil Wire Basket

Connector Kit [AF-KITCH1]

- Standard bar connector is 30mm x 18mm
- Standard finish is zinc plated
- Sold in packs of 10
(AF-EG-CBN connector hardware included)

NOTE: Always place nut on outside of tray

Connector Kit [AF-KITCH2]

- Bottom connector is 50mm x 60mm
- Standard finish is zinc plated
- Sold in packs of 10
(AF-EG-CBN connector hardware included)

NOTE: Always place nut on outside of tray

**Connector Kit [AF-KITCH3]**

- Universal connector is 18mm x 24mm
- Standard finish is zinc plated
- Sold in packs of 10
(AF-EG-CBN connector hardware included)

NOTE: Always place nut on outside of tray

**Connector Hardware [AF-EG-CBN]**

- M6 x 20 Carriage bolt
- M6 Hex nut
- Standard finish is zinc plated
- Sold in packs of 10 each

NOTE: Always place nut on outside of tray

U Support Bracket [AF-USB-3M]

Weight: 3.1 kg/each

- U support bracket 24mm x 24mm channel
- Standard finish is zinc plated
- Support is 3m long, customer cuts to size as needed
- Cut lengths 150mm wider than tray width for trapeze
Cut lengths 25mm shorter than tray width for single rod support
- Unique grip system requires only a push of a screwdriver to fasten the tray to the supports

Single Rod

Trapeze

Support Bracket Medium [AF-MSB-3M] & Heavy [AF-HSB-3M]

- Heavy support bracket is 41mm x 41mm strut, Medium support bracket is 41mm x 21mm strut
- Standard finish is zinc plated
- Support is 3m long, customer cuts to size as needed
- Cut lengths 150mm wider than tray width for trapeze
Cut lengths 25mm shorter than tray width for single rod support
- Unique grip system requires only a push of a screwdriver to fasten the tray to the supports

Weight 5.4 kg/each

Weight: 7.5 kg/each

Single Rod

Trapeze

Drop Rod Clip [AF-SIDECLIP]

Weight: 0.06 kg/each

- Standard finish zinc plated
- 2mm Bracket thickness
- For all widths of tray
- Use AF-SIDECLIPM8 for 8mm Rod
- Use AF-SIDECLIPM10 for 10mm Rod

**Drop Rod Clip [AF-RODCLIP1]**

Weight: 0.05 kg/each

- Standard finish zinc plated
- 2mm Bracket thickness
- For all 100mm wide & 150mm wide tray

**Drop Rod Clip [AF-RODCLIP2]**

Weight: 0.18 kg/each

- Standard finish zinc plated
- 2mm Bracket thickness
- For all 200mm wide & 300mm wide tray

Ceiling Clip [AF-CCA-{W}]

- For attaching tray to ceiling
- Standard finish Galvabond Z275
- Easy mounting of the cable tray using grips and autolock

Part No.	Tray Size (W) (mm)	Length (L) (mm)	Weight (kg)	Load (kN)
AF-CCA-100	100	145	0.59	1.08
AF-CCA-150	150	195	0.67	0.78
AF-CCA-200	200	245	0.75	0.59
AF-CCA-300	300	345	0.90	0.39
AF-CCA-400	400	445	1.05	0.29

Wall Clip [AF-CPA-{W}]

- For attaching tray to wall
- Standard finish Galvabond Z275
- Easy mounting of the cable tray using grips and autolock

Part No.	Tray Size (W) (mm)	Length (L) (mm)	Weight (kg)	Load (kN)
AF-CPA-100	100	145	0.37	1.28
AF-CPA-150	150	195	0.44	1.28
AF-CPA-200	200	245	0.52	0.88
AF-CPA-300	300	345	0.67	0.59
AF-CPA-400	400	445	0.82	0.49

Pendant [AF-PPA-{H}]

- Standard finish is Galvabond Z275
- For attaching tray to ceiling. Used with wall clip AF-CPA Series

Part No.	Height (H) (mm)	Weight (kg)
AF-PPA-150	150	0.32
AF-PPA-250	250	0.50
AF-PPA-350	350	0.59
AF-PPA-450	450	0.77
AF-PPA-550	550	0.91
AF-PPA-650	650	1.04

ZED [AF-ZBAR-3M]

Weight: 4.8 kg/each

- ZED floor or wall mounted support is 13mm x 89mm
- Standard finish Galvabond Z275
- Support is 3m long, customer cuts to size as needed
- Unique grip system requires only a push of a screwdriver to fasten the tray to the supports

Application Example

Cantilever Medium [AF-CANTM-(W)] & Heavy [AF-CANTH-(W)]

- Standard finish is Hot Dipped Galvanised
- Cantilever arm support 41mm x 41mm or 41mm x 21mm strut
- Unique Auto-Lock system requires no hardware to fasten the tray to the supports
- Use Strut Profile to support other items below the support bracket using strut hardware

Part No.	Channel Size (mm)	Tray Width (W) (mm)	Length (L) (mm)	Weight (kg)	Load (kN)
AF-CANTM-150	41 x 21	150	186	0.45	2.45
AF-CANTM-200	41 x 21	200	236	0.52	1.77
AF-CANTM-300	41 x 21	300	336	0.66	1.57
AF-CANTH-200	41 x 41	200	236	0.72	4.41
AF-CANTH-300	41 x 41	300	336	0.95	3.34
AF-CANTH-400	41 x 41	400	436	1.29	2.65
AF-CANTH-500	41 x 41	500	536	1.52	2.65
AF-CANTH-600	41 x 41	600	636	1.78	2.16

Application Example

Hanger [AF-HGR-50]

- Standard finish is Galvabond Z275
- Ceiling or center hung with threaded rod

NOTE: For use with AF50-50 only

Application Example

Hanger [AF-HGR-100]

- Standard finish is Galvabond Z275
- Ceiling or center hung with Unirod steel threaded rod

NOTE: For use with AF50-100 or AF100-100 only

Application Example

Wall Bracket [AF-WB-50]

- Standard finish is Galvabond Z275

NOTE: For use with AF50-50 only

Application Example

Single Channel Pendant [P2663-(L)]

- Standard finish is zinc plated

Part No.	Length (L) (mm)	Design Uniform Load (kN)	Weight (kg)
P2663-250	250	3.01	1.02
P2663-400	400	1.88	1.43
P2663-550	550	1.36	1.86
P2663-700	700	1.06	2.29

Application Example

Back-to-Back Channel Pendant [P2542 thru P2546]

- Standard finish is zinc plated

Part No.	Length (L) (mm)	Design Uniform Load (kN)	Weight (kg)
P2542	305	7.57	2.28
P2543	460	5.22	3.14
P2544	610	3.98	4.00
P2545	760	3.21	4.87
P2546	915	2.67	5.74

Application Example

ACROFIL® – HANGING BRACKETS

Hanging Bracket [AF-AB-USB]

Weight: 0.28 kg/each

- Standard finish is Galvabond Z275
- For use with AF-USB-3M Support Bracket Channel see page 48

Hanging Bracket [AF-AB-HSB]

Weight: 0.50 kg/each

- Standard finish is Galvabond Z275
- For Use with:
 - AF-MSB-3M Medium Support Bracket Strut
 - AF-HSB-3M Heavy Support Bracket Strut see page 48

Hanging Bracket [AF-CB-MSB]

Weight: 0.66 kg/each

- Standard finish is Galvabond Z275
- For Use with:
 - AF-MSB-3M Medium Support Bracket Strut see page 48

Hanging Bracket [AF-CB-HSB]

Weight: 1.35 kg/each

- Available in hot-dipped galvanized
- For Use with:
AF-MSB-3M Medium Support Bracket Strut
AF-HSB-3M Heavy Support Bracket Strut

Bracket [AF-CMA-(W)]

- Standard finish is Galvabond Z275
- Mounted on cantilever arms or channels
- Easy mounting of the bracket using grips and autolock
- Designed for use with new/existing 41mm strut framing

Part No.	Tray Width (W) (mm)	Length (L) (mm)	Wt (kg)	Load (kN)
AF-CMA-100	100	133	0.36	1.27
AF-CMA-150	150	183	0.45	1.03
AF-CMA-200	200	233	0.50	0.78
AF-CMA-300	300	333	0.68	0.59
AF-CMA-400	400	433	0.82	0.39

Pedestal Brackets [AF-PED-150] & [AF-PED-300]

- Channel use on pedestal for raised floor
- Attach to pedestal using U-Bolt & nuts (included)

AF-PED-150

AF-PED-300

Application Example

Application Example

Pedestal Kit [AF-PED-KIT]

- Channel use on pedestal for raised floor
- Attach to pedestal using U-Bolt & nuts (included)

Application Example

Application Example

Cover [AF-CVR-(W)]

- Standard finish is Galvabond Z275
- Length is 3m

Part	Weight (kg)
AF-CVR-50	2.4
AF-CVR-100	3.6
AF-CVR-150	4.8
AF-CVR-200	6.0
AF-CVR-300	8.4
AF-CVR-400	16.2
AF-CVR-450	18.0
AF-CVR-500	19.8
AF-CVR-600	23.4

Application Example

**Tray Dividers [AF-DIV50], & [AF-DIV100]**

- Standard finish is Galvabond Z275
- Locks into tray with auto-lock tabs (no hardware required)
- Cut “V” notches into bottom flange to make barriers for flat fittings

Part	Height (H) (mm)	Weight (kg)
AF-DIV-50	50	2.4
AF-DIV-100	100	3.6

Application Example

**Drop Out [AF-(W)DO]**

- Standard finish is Galvabond Z275
- AF-UNI-DO can be used in any 50mm x 100mm mesh opening or as a “side-out”

Application Example

Application Example

Blind End [AF(H)-BE(W)]

- Standard finish is Galvabond Z275
- Standard use per blind end is:
(2 pc) AF-KITCH3 (sold separately)

NOTES:

1. Always place nut on outside of tray

Part	Weight (kg)
AF50-BE100	0.08
AF50-BE150	0.10
AF50-BE200	0.13
AF50-BE300	0.18
AF50-BE400	0.23
AF50-BE450	0.26
AF50-BE500	0.29
AF50-BE600	0.32

Part	Weight (kg)
AF100-BE100	0.24
AF100-BE200	0.29
AF100-BE300	0.34
AF100-BE400	0.44
AF100-BE450	0.49
AF100-BE500	0.54
AF100-BE600	0.65

Part	Weight (kg)
AF150-BE300	0.51
AF150-BE400	0.64
AF150-BE600	0.95

Box Connector [AF(H)-(W)CB]

- Standard finish is Galvabond Z275
- Standard use per box connector is:
(2 pc) AF-KITCH3
(5 pc) AF-EG-CBN
(both sold separately)

NOTES:

1. Always place nut on outside of tray
2. For use with AF50 & AF100

Lighting Bracket [AF-LIGHTB]

- Standard finish is Galvabond Z275

**Application Example****Electrical Box Bracket [AF-JBOX]**

- Standard finish is Galvabond Z275

Application Example**Wall Sleeve [AF(H)-(W)WS]**

- Standard finish is Galvabond Z275
- Standard use per wall sleeve is:
 - (4 pc) AF-KITCH3
 - (5 pc) 6112-0
 - (4 pc) 5003-1
 - (4 pc) 5009-1
 - (8 pc) EM-CC
 - (all sold separately)

NOTES:

- Always place nut on outside of tray
- Example AF50-12WS

Fittings Overview

Fittings are typically fabricated on the job.

To determine the fitting hardware required to create a set of fittings, see the following pages

Cutting Tool [AF-CUTTOOL]

Fittings can be formed easily on-site by cutting the bottom and side wires. Cut the tray bars on an angle as shown in the illustration.

Note: When cutting, keep the remaining sharp edge away from the inside of the tray.

90° Bends - Long Radius

1 CUT THE BOTTOM AND SIDE WIRES

To form 90° bends in the tray, cut out the number of sections shown below based on the width of the tray used.

2 ASSEMBLE USING APPROPRIATE HARDWARE

Standard hardware is shown with each bend size.

Advantages:

- Use as bonding jumper
- Vertical support of standing sections
- Adjustable radius allowances

NOTE: Always place nut on outside of tray

Cut Out 4 Sections of Mesh as Shown   (1) AF-TBAR1100 (5 pcs) AF-KITCH3	 AF50-100 406mm Inside Radius  AF50-150 305mm Inside Radius  AF50-200 305mm Inside Radius

ACROFIL® – 90° SHORT RADIUS BENDS

90° Bends - Forming Instructions

To form 90° bends in the tray, cut the wires shown in the color shaded area of the drawing which corresponds to the width of the tray used.

1 CUT THE BOTTOM AND SIDE WIRES

Bends can be formed easily on-site by cutting the bottom and side wires. The shaded areas indicated should be cut and removed. Then, simply bend ACROFIL cable tray to form a 90° angle and you are ready to install. Make sure you use the appropriate hardware.

2 ASSEMBLE USING APPROPRIATE HARDWARE

AF-KITCH1

- Standard use is:
 Sizes 100mm - 300mm (1 pc) AF-KITCH1
 Sizes 400mm - 600mm (2 pc) AF-KITCH1

NOTE: Always place nut on outside of tray

90° Bends - Cutting Diagrams

90° Bends - Cutting Diagrams

400mm

450mm

500mm

600mm

Standard Tee

- Standard use per tee is:
(2 pc) AF-TBAR550 or (1 pc) AF-TBAR1100 cut in half
(8 pc) AF-KITCH3

NOTE: Always place nut on outside of tray

To form a tee, cut the wires marked in blue.

Cross

- Standard use per cross is:
(4 pc) AF-TBAR550 or (2 pc) AF-TBAR1100 cut in half
(16 pc) AF-KITCH3

NOTE: Always place nut on outside of tray

To form a cross, cut the wires marked in blue.

Reducer

- Standard use per reducer is:
(2 pc) AF-TBAR1100
(8 pc) AF-KITCH3
(1 pc) AF-KITCH2

NOTE: Always place nut on outside of tray

Offset

- Standard use per offset is:
(2 pc) AF-TBAR1100
(8 pc) AF-KITCH3
(1 pc) AF-KITCH2

NOTE: Always place nut on outside of tray

Riser

Risers and drops can be created to avoid different obstacles in the job path. Simply cut out the required number of side mesh sections and bend a vertical riser or drop to fit the application.

Grounding

Unistrut recommends use of a separate ground wire for equipment grounding.

Any non-conductive coating to ACROFIL must be removed by the contractor/end-user to maintain electrical continuity.

Straight Sections - The grounding of two straight sections requires the use of

- (2) AF-GCLIP's and
- (2) AF-EG-CBN's.

These items consist of grounding clips and the appropriate hardware, for connecting to the trays. One clip should be placed on both sides of the tray, attached at the self-splicing bar.

Straights

- 2 pcs of AF-GCLIP
- 2 pcs of AF-EG-CBN

AF-EG-CBN

See pg. 47

Application Example

Fittings

- AF-TBAR1100 and
- AF-KITCH3s

Fittings - Grounding of fittings requires special attention. Typically fittings are fabricated in the field by cutting straight sections, thus altering the cross sectional area of the tray. A bonding jumper, and or a AF-TBAR1100 Splice, along with the appropriate hardware must be used on either side of the fitting to ensure electrical continuity.

Application Example

Grounding Clip [AF-GCLIP]

- Standard finish is Galvabond Z275
- Sold in packs of 10
- Connection to splice bars requires a nut and bolt assembly (AF-EG-CBN) purchased separately
- Use on both sides of tray

NOTE: Always place nut on outside of tray

AF-GCLIP's must be utilized if the tray is to be utilized as an equipment ground conductor.

Grounding Clamp/Split Bolt

- Split bolts are utilised for the attachment of a separate ground wire.

NOTE: Always place nut on outside of tray

Application Example

AF-BCLIP

- AF-BCLIP used as a hold-down clip

Application Example

Drill hole in aluminum angle of relay rack.

Use AF-BCLIP to hold ACROFIL to relay rack using 6 x 20 round head machine screw and bolt and washer.

Application Example

Hex Head Set Screws

- Standard finish is Zinc Plated

Part No.	Size	Weight/100 (kg)
HHS0620	M6 x 20	0.6
HHS0625	M6 x 25	0.7
HHS0630	M6 x 30	0.8

Unirod Steel Threaded Rod

- Standard finish is Zinc Plated
- Standard Length is 3M

Unirod Load Data: Maximum recommended tensile load is based on a factor of safety of 2.5 using the appropriate stress area of thread and ultimate tensile strength of 430 MPa.

Part No.	Description	Max. Recommended Tensile Load (kN)	Mass (kg/m)
UR06	M6	3.47	0.20
UR08*	M8	6.32	0.35
UR10*	M10	10.02	0.50

* Also available in Hot Dipped Galvanised.

1.0 Acceptable Manufactures

Provide "ACROFIL" Wire Basket type of cable management system as manufactured by Unistrut or engineered approved equal.

All cable trays shall be installed in a neat uniform fashion. Installing contractor shall field modify tray system to accommodate the exact routing requirements.

2.0 Material/Finishes

Wire basket tray to be fabricated from high strength steel wires.

2.1 Acceptable finishes

2.1.a Standard Finish

Zinc Plated Steel in accordance with AS 1789

2.1.b Other Finishes

Hot Dipped Galvanized – Steel in accordance with AS/NZS 4680

Galvabond – AS 1397 with a coating class of Z275.

SS – AISI 316L stainless steel.

SS304 – AISI 304L stainless steel.

3.0 - Straight Sections

Straight sections shall be manufactured from high strength steel wires forming 50mm X 100mm openings and shall conform to the following dimensions.

3.1 Length

Straight sections shall be supplied in 3m lengths.

3.2 Width

Widths shall be 50, 100, 150, 200, 300, 400, 450, 500, or 600 as called out on drawings. (mm)

3.3 - Load depths

The load depths shall include 50mm & 100mm as required.

4.0 Splices

All straight sections shall be supplied with pre-installed, auto-locking, splices plates, where possible, as per Unistrut "ACROFIL". Trays design shall allow for a snap together type connection and shall require no nut and bolt assembly.

5.0 Fittings

All fittings shall be fabricated in the field as required, per manufacturer's recommendations. Radius of the fittings shall be based on the "minimum bending" radius of the cables being installed.

6.0 Accessories

Accessories such as blind ends, dropouts, and barriers, etc... shall be installed as specified on drawings.

7.0 Supports

Supports shall include, but are not limited to, center type, trapeze type, wall supports, and floor supports.

7.1 Auto Locking

All supports shall be supplied with an Auto locking feature, requiring no special tools for attachment of the trays.

7.2 Finish

All supports, including threaded rod and associated hardware shall be zinc plated coated to AS 1789.

ADJUSTABLE, DEMOUNTABLE, REUSABLE

LOOK FOR THESE FEATURES:

Large chamfer in the nut eases starting of bolt.

Special shaped inturned edges and tapered, serrated grooves produce strong vice-like grip between channel and nut.

- ◆ Channel edges and nut's tapered grooves act as guides to provide positive alignment of connection.
- ◆ Nut teeth grip the channel's inturned edges, tying the channel sides together in a "box" configuration for added strength.
- ◆ Longitudinal movement of nut is resisted as hardened teeth bite into the inturned edges.

Spring allows precision placement anywhere along channel length, then holds nut in position while connection is completed - the installer's "third hand".

Spring nut is inserted anywhere along continuous slot. Rounded nut ends permit easy insertion.

A 90° turn positions the serrated grooves in the nut with the inturned edges of the channel.

Fittings may be placed anywhere along channel slot permitting complete freedom of adjustment. The need for drilling holes is eliminated.

The fitting makes the connection between any framing channels or as means for other attachments.

A turn of a spanner locks the serrated teeth of the nut into the inturned edges of the channel to make the strong, vice-like connection.

FRAMING MEMBERS

Channels and continuous inserts are accurately and carefully cold formed to size from low carbon strip steel. The channel has a continuous slot with inturned edges. Secure attachments may be made to the framing member with the use of hardened, toothed, grooved nuts which engage the inturned edges.

FITTINGS

The fittings, unless noted otherwise, are punch press formed from low carbon steel plates or strip.

CHANNEL NUTS

The UNISTRUT nuts are produced from steel bars and after all manufacturing operations are completed, zinc plated nuts are case hardened. They are rectangular with the ends so shaped as to permit a quarter turn crosswise in the framing member after inserting through the slotted opening in the channel and to prevent any further turning of the nut. Two serrated grooves in the top of the nut engage the inturned edges of the channel and, after bolting operations are completed, will prevent any longitudinal movement of the bolt and nut within the framing member. All bolts and nuts have ISO metric coarse screw threads.

MASSES AND DIMENSIONS

Masses given for all material are approximate shipping weights. All dimensions subject to commercial tolerance variations.

Material

All single Unistrut Channel members are accurately and carefully rolled from strip steel to AS1594 and AS1365. Spot-welded combination members are welded 75mm (maximum) on centre. Some members may require fillet welding.

Standard Lengths

Standard lengths of the above channels are 6m. Facilities are available to cut standard lengths into any special lengths for a small cutting charge.

Section Shape

The roll forming process used by UNISTRUT AUSTRALIA produces a consistent channel within the manufacturing tolerance allowed. The process includes stresses within the section itself which are released when the channel is cut. This creates a common condition known as "Bellmouth" where the section deforms slightly for a small distance in from the end.

FINISHES

All channels are available in Plain, Hot Dipped Galvanised, Galvabond, Zinc Plated and Polyester finishes.

Plain - Plain finish on UNISTRUT channel is an oiled finish that is applied to the raw material by the steel mill. The cold rolling process used to form UNISTRUT channel removes the excess of this oil and the residue provides a modicum of protection for the channel in storage. The plain finish on UNISTRUT fittings is that of the commercial bar stock input material. No surface treatment is applied to plain finish fittings.

Galvabond Channel - Input material is supplied by the steel mill generally in accordance with AS1397 having a coating class of Z275. The material is slit to width and roll formed to shape.

Powder Coated - Channel and parts are carefully cleaned and phosphated. Immediately after phosphating, a uniform coat of thermosetting polyester powder is electrostatically applied then baked. Minimum coating thickness to exterior surfaces is 50 microns. The polyester coating is ultra-violet stabilised.

Hot Dipped Galvanised - Coatings are applied generally in accordance with AS/NZS4680. The thickness of the coating is dependent on the material thickness of the component being galvanised. It should be noted that due to the galvanising process, the thickness of the coating will vary over the surface and should be taken into account during component assembly. It may be necessary to remove excess build-up prior to use.

Zinc Plated - Channel, fittings and components are electroplated generally in accordance with AS1789. Fasteners are electroplated generally in accordance with AS1897 Service Condition 1.

Stainless Steel - Unistrut stainless steel channel is manufactured from Grade 316 stainless steel. The material is slit to width and roll formed to shape. Grade 316 stainless steel has excellent corrosion resistance and has advantages over grade 304 stainless steel, such as:

- Resistance to pitting and crevice corrosion in chloride environments.
- Superior resistance to ordinary rusting in most applications.
- Regularly used in aggressive coastal and marine environments.
- Highly recommended for food processing environments where it can be easily cleaned and has a greater resistance to organic and inorganic chemical substances.

Aluminium - Unistrut aluminium channels are manufactured from high strength alloy 6106-T6 for all extruded components and 5005 for sheet or plate components. These alloys are suitable for marine applications and offer excellent all round corrosion resistance.

Specific Coating - When specific applications require other commercially available finishes, they can be supplied according to specification.

We reserve the right to make specification changes without notice in the interest of improving our products.

Beams & Columns Loads**Notes to Table**

Note 1: Loads are governed by shear or web crippling.

Note 2: For uniform beam working loads asymmetric sections are required to be adequately braced to prevent rotation and twist.

Beam Loads

The loads and deflections shown are based on simply supported beams uniformly loaded.

Notes on Derivation of Structural Data**1. Section Properties**

Section properties have been derived from 'as formed' shapes and are based on nominal dimensions and nominal base steel thickness. Nominal masses are calculated from the tabulated areas based on a steel density of 7850 kg per cu.m. For dead load calculations the tabulated masses should be increased by 10% to allow for rolling tolerances, and the result multiplied by 0.0098 to give corresponding dead load (self weight) in kN per m. run of section. Also note the beam and column loads do not make allowance for self weight of the section. When designing a structure in which the section forms an integral part, the self weight should be determined using the method described above and subtracted from the tabulated load.

2. Beam and Column Load Tables

Ultimate load values have been calculated from the section properties as permitted by AS/NZS 4600 Cold Formed Steel Structures code. The guaranteed minimum yield stress F_y has been taken as 264MPa for plain channels, and the increase allowed resulting from cold forming has been determined in accordance with the code. The listed working loads have been derived from the ultimate load divided by 1.5.

2.1 Span or Column Length

Listed value is to be taken as the distance between centres of supports.

2.2 Beam Load at Maximum Permissible Stresses

In order to establish the table of working loads that can be carried by the corresponding section, the ultimate limit state loads that could be permitted by the code were first determined. These were divided by 1.5 to provide 'conservative' working loads. The load is considered to be uniformly distributed along the span and orientated with respect to the section, as defined by the diagrams to cause bending about X-X axis only. The webs of the beams are

assumed to be unstiffened and have been checked for end bearing in accordance with clause 3.3.6 of AS/NZS4600:1996. Where this is critical the working loads have been appropriately reduced. This assessment has been based on a rigid support with the beam bearing on each support for a length equal to at least the straight length of web-depth of the basic section.

2.3 Deflection

Deflections are calculated for the corresponding beam working load, using standard formulae. Deflections or uniformly distributed loads for conditions other than those tabulated may be calculated from the following:

$$\delta_2 = (W2 / W1) \times (L2 / L1)^3 \times \delta_1$$

where:

$W1$ = tabulated load in kN

δ_1 = corresponding tabulated deflection in mm

$L1$ = corresponding tabulated length in mm

$W2$ = new load

$L2$ = new length

δ_2 = deflection corresponding to new length and new load

It is recommended that beam deflections generally be limited to the smaller of span/180 or 10mm and loads restricted accordingly. These limitations are based on 'visual straightness' with the latter value subject to variation to suit particular visual or other physical requirements.

2.4 Maximum Column Load

Listed values of column load capacity are derived on the basis of a concentric axial load applied to the section, acting as a column with an effective length corresponding to the listed value, i.e. translational and torsional restraint available at the centres of supports. For other conditions of loading and/or restraint, reference should be made to the appropriate sections of AS/NZS 4600 Cold Formed Steel Structures.

3. Recommended Bearing & Connection Loads

Listed values are based on extensive testing of components by Unistrut Australia Pty Limited using a factor of safety of 2.5 against failure of the connection.

4. Point Loads

For point loads at midspan, the allowable loads are half the values shown in the tables. The deflection for the point load is obtained from: $\delta_2 = 0.80 \times \delta_1$ where δ_1 is the deflection for a uniform load which is double the value of the point load.

ABBREVIATIONS

A = Area of Section
I = Moment of Inertia
Z = Section of Modulus
r = Radius of Gyration

FINISHES:

AL Aluminium
GB Galvabond
HG Hot Dipped Galvanised
MG Mechanically Galvanised
PL Plain
PVC Plastic
SS Stainless Steel
ZP Zinc Plated
ZA Zinc Plated Chromate

Mass: 0.11kg/m

P1184A – Aluminum Closure Strip

Standard Length: 3m
Mass: 0.18kg/m

Unistrut Systems

Channel

Channel End Caps – Plastic, UV Stabilised

P2240

Mass: 0.70kg/100

For P1000 & P2000 Channels

P4240

Mass: 0.40kg/100

For P3300 & P4000 Channels

P5580

Mass: 1.2kg/100

For P5500 Channels

Typical Installation

P2860-10 – Channel End Caps – Plastic

Fits P1000 & P2000 Channel

Mass: 1.54kg/100

Note: Caps provide a protective covering on protruding channels to guard against personal injury or damage to clothing. They slip easily over the ends of channel.

Concrete Inserts are manufactured from standard Unistrut channel sections. They may be installed in floors, walls or concealed for the support of all kinds of piping, conduit, cable and other industrial equipment. Unistrut nuts can be inserted anywhere along the insert providing a means of attaching fittings or hanger rods.

Fixing Methods

Note: The lug protruding from the back of the insert are designed to provide positive anchorage in the concrete. Distortion of the lugs is not recommended as it will severely reduce the performance of the insert.

Form Ply: Unistrut P1000CI Concrete Inserts are placed face down on the form at the required location and fixed up using 2.8mm x 75mm long flat head nails through holes provided. The point of the nail should be bent over to prevent lifting should the vibrator make contact.

Note: For P3300CI Concrete Insert, a 50mm long nail is recommended.

Steel Forms: Concrete Inserts are either track welded or wired to reinforcement.

Filler Methods

Unistrut Concrete Inserts are supplied foam filled to prevent the ingress of grout and cement.

Finishes

Unistrut Concrete Inserts are available in the following styles and finishes - P1000 & P3300 in Hot Dipped Galvanised and Stainless Steel - Grade 316.

Note: Test results are available on request.

Installing Concrete Insert

1. Nail insert to concrete form using prepunched nail holes

2. Attach rebars to flanges on insert

The Unistrut concrete insert is firmly fixed to the concrete side of the form before pouring. When the forms are removed, the insert is ready for use. Brackets and other components can be attached at any point of the continuous entry channel.

Using Installed Concrete Insert

1. Scrape out filler

2. Insert channel nut.

3. Attach fitting

UNISTRUT CONCRETE INSERTS

P1000CI

Mass: 2.80kg/m

Standard Length: 6m

Finish: Hot Dipped Galvanised and Stainless Steel grade 316.

Loading Data: The support capacity of any concrete insert depends largely on the strength of the concrete used. Therefore, we cannot guarantee any particular load.

Recommended Pullout Loading*:

Inserts 300mm and over 8.83kN per 300mm.

Factor of Safety: Approximately 3

Design load based on 21mpa concrete

Lugs at 100mm centres

Note: Exercise care during installation - Do not bend lugs.

P3300CI

Mass: 1.94kg/m

Standard Length: 6m

Finish: Hot Dipped Galvanised and Stainless Steel grade 316.

Loading Data: The support capacity of any concrete insert depends largely on the strength of the concrete used. Therefore, we cannot guarantee any particular load.

Recommended Pullout Loading*:

Inserts 300mm and over 6.37kN per 300mm.

Factor of Safety: Approximately 3

Design load based on 21mpa concrete

Lugs at 100mm centres

Note: Exercise care during installation - Do not bend lugs.

P3753 HEAVY DUTY INSERT

Standard Length: 300mm

Finish: Hot Dipped Galvanised and Stainless Steel grade 316.

Loading Data: Because the support capacity of any Concrete Insert depends largely on the strength of the concrete used, we cannot guarantee any particular load.

Recommended Pullout Loading*: 11kN

Spacing of pull out loads 76mm.

Max allowable uniform load 22kN

Recommended Loading*: We can supply a range of heavy duty inserts to suit different applications requiring load capacities outside the range of our normal concrete insert. Please contact your local Customer Service Centre for assistance in these cases.

Plastic for Extruded Aluminium Channels

LOAD DATA

Approximate beam load capacities for channel sections may be obtained from the engineering data sections in this catalogue. Multiply data by the following percentages:

Material	Load Factor
Extruded Aluminium	33%

Nut pullout strength and resistance to slip for sections may be obtained from the engineering data sections in this catalogue. Multiply data by the following percentages:

Material	Slip Percentage Factor	Pullout Percentage Factor
Extruded Aluminium	75%	50%

UNISTRUT FITTINGS: Some fittings, as shown in this catalogue can be supplied in aluminium on special order.

Material

Unistrut spring nuts are manufactured from steel bars, and after machining operations are completed, zinc plated nuts are case hardened. Hardening assures positive biting action into the inturned edge of the Unistrut channel. Similar nuts without springs are also available. Stud nuts are manufactured by welding studs to UNISTRUT nuts except for USB series which are drop forged. Nuts and bolts are manufactured to AS1111 & AS1112.

Threads – All threads on the nuts and bolts are metric coarse.

Design Bolt Torque – Refer to Engineering Data Page 118

Finishes –

Nuts and bolts are zinc plated to Australian Standards AS1897, selected sizes also available in hot dipped galvanised to AS1214.

Fittings - General Information

Material

Unless otherwise noted, all fittings are punch press formed from plate or strip steel.

Fitting Application

All product drawings illustrate only one application of each fitting. In most cases many other applications are possible.

The members shown in the illustrations are P1000, 41mm square, except where noted otherwise. All 14mm diameter holes use M12 x 24 hex head set screws and M12 nuts - P1010, P4010 or P5510 - depending on the channel used. Nuts and bolts are not included with the fitting and must be ordered separately.

Design Load Data

Design load data, where shown, is based on the ultimate strength of the connection with a safety factor of 2.5.

Design Bolt Torque

Refer to Engineering Data (See Page 118).

Finishes

All fittings in this section are available in zinc plated finish to Australian Standard AS1789 and Hot Dipped Galvanised to AS/NS4680.

Mass: 19kg/100

Square hole for M6 x 25 Carriage bolt and nut

Application

P1000

P2000

Design Load: 0.5kN
Finish: Zinc Plated

P2535 - Conduit Hanger Fitting

Mass: 13kg/100

M6 x 15 Countersunk screws and P3016 nuts included

Conduit hanger fitting for rigid attachment to Unistrut channel.

Design Load: 0.5kN
Finish: Zinc Plated

P2755

Mass: 30kg/100

Square hole for M6 x 2 Carriage bolt and nut

Application

P1001

P5500

Design Load: 0.5kN
Finish: Zinc Plated

P2539 - Fixture Hanger Fitting

Mass: 11kg/100

M6 x 20 screw and nut included.

M6 x 25 carriage bolt and nut included

Design Load: 0.5kN
Finish: Zinc Plated

Fluorescent hanger fittings provide a means of mounting fixtures to Unistrut. They are shipped flat and are easily bent to form around the Unistrut channel. For use with P1000 and P2000 Unistrut channels.

Fluorescent Fixture – Support Applications

Spring-Nut attachment system

Slotted channel attachment system

P2377 - Splice Fitting

For joining together continuous runs of trunking channel. P2377 external 41 deep, for use with P1000 and P2000 trunking. Four P3016 (page 106) clamping nuts and four M6 x 15 countersunk head screws should be ordered with each fitting.

Finish: Zinc Plated

Mass: 25kg/100

Joiner Fittings

Cast aluminium fittings designed to fit inside the channel section and provide a continuous profile on external surfaces. Fittings are secured to the channel by a pre-installed screw and washer assembly. Closure strip can be clipped into channel and extended over the fitting to complete a neat installation.

Typical Assembly

P2902 Two Way

Mass: 12.2kg/100

Socket Cup Point Set Screws Included
Material: Cast aluminum.

P2901 Three Way

Mass: 15.9kg/100

Socket Cup Point Set Screws Included
Material: Cast aluminum.

P2903 Four Way

Mass: 20.4kg/100

Socket Cup Point Set Screws Included
Material: Cast aluminum.

P2900 One Way

Mass: 9.1 kg/100

Socket Cup Point Set Screws Included
Material: Cast aluminum.

P2552 –Wire Retainer [Fibre]

Wire retainer is pushed into Unistrut Channel to support wires until the Closure Strip is installed.

Application

UNISTRUT - FLUORESCENT FIXTURE FITTINGS

P3016 - Trunking Nuts

Mass: 1kg/100

For the fixing of fittings and accessories
6mm diameter

CKS0615 - Countersunk Head Screw

Mass: 0.3kg/100

Size: M6 x 15

Unistrut Systems

P3116 - Fixture Stud Nut

Mass: 3.5kg/100

Size: M6 x 30

SHS0620 - Slotted Hex Head Screw

Mass: 0.6kg/100

Size: M6 x 20

	Fittings 1200mm apart	6.1	5.9	5.7	5.6	6.0	5.6

Note: Spacings have been calculated to limit section deflections between hangers to approximately 10mm, with sections considered continuous over three spans.
For Single spans - multiply spacing by 0.85. For Double spans - multiply spacing by 1.07.
For greater than 3 spans - use table above. Spacings have been calculated for Unistrut Channel opening on the underside.

Design Load - 5.34 kN

Brackets - General Information

Material

Unless otherwise noted, all fittings are punch press formed from plate or strip steel.

Fitting Application

All product drawings illustrate only one application of each fitting. In most cases many other applications are possible.

The members shown in the illustrations are P1000, 41mm square, except where noted otherwise. All 14mm diameter holes use M12 x 24 hex head set screws and M12 nuts - P1010, P4010 or P5510 - depending on the channel used. Nuts and bolts are not included with the fitting and must be ordered separately.

Design Load Data

Loadings are as shown based on calculations in accordance with AS/NZS 4600 and AS 4100.

Design Bolt Torque

Refer to Engineering Data (See Page 118).

Finishes

All fittings in this section are Hot Dipped Galvanised to AS/NZS4680 unless otherwise shown.

Standard Dimensions

The following dimensions apply to all fittings except as noted on the individual part drawings:

- Hole Size - 14mm diameter
- Hole Spacing - 21mm from end
- Hole Spacing - 48mm on centre
- Width - 40mm
- Thickness - 6mm

Beam Clamps- General Information

Applications

Beam Clamps are designed to provide a fast easy attachment to overhead structures. They alleviate the need for drilling and welding as well as being completely adjustable.

Finishes – Standard finishes as shown.

Design Bolt Torque – Refer to Engineering Data (page 118)

P2676

Mass: 33kg/100

P2679 - Swivel Nut

Part No.	Size	Mass kg/100
P267910	M10	17
P267912	M12	1.5

Note: Swivel nuts are used with P2676, P2682 and P2677. Order size as required.

Design Load
1.33 kN

Design Load
2.23 kN

P2677

Mass: 15kg/100

P2677 clevis hanger to be used with P2676 to provide angle adjustment and 15 degree free swing for up to M12 rod suspension.

Order P2679 series swivel nuts required.

Standard Finish: Z.P

P2682

Mass: 23kg/100

Hanger clevis for up to M12 rod suspension. Suitable for wood ceilings. May also be used with P2677 as illustrated in application drawings.

Standard Finishes: Z.P.

P1386

Mass: 12kg/100

Design Load Per Pair:

P1000 - 5.30kN

P2000 - 3.92kN

Finishes: Z.P. & H.D.G

P1379

Mass: 34kg/100

Design Load Per Pair:

P1000 - 5.34kN

P2000 - 3.92kN

Finishes: Z.P. & H.D.G.

Each clamp requires
 M12 x 30 Hex Head Set Screw and
 M12 Channel Nut (not included)

UNISTRUT - BEAM CLAMPS

P2785 & P2786

Design Load Per Pair: 8.82kN
Finishes: Z.P & H.D.G

Use in pairs only

P2785 accepts following channels:
P1000, P2000, P3300, P4000
A = 86 Mass: 38kg/100

P2786 accepts following channels:
P1001, P2001, P5500
For use with beams up to 19mm
A = 127 Mass: 41kg/100

P1796

Mass: 49kg/100

Suits P1000 & P2000

Design Load Per Pair: 4.32kN

Engineering Data - Beams & Columns

Notes to Table

Note 1: Loads are governed by shear or web crippling.

Note 2: For uniform beam working loads asymmetric sections are required to be adequately braced to prevent rotation and twist.

The table should be read in conjunction with 'Notes on derivation of Structural Data' page 83, and 'How to use Load Tables' pages 122-123.

Load capacities have been calculated in accordance with the provisions of AS/NZS 4600:1996 "Cold-formed steel structures", and in particular, Section 6.2.2.7. The bolting system chosen using the data provided in the tables will perform as specified when design, fabrication and erection are carried out in accordance with Unistrut's recommendations and accepted building practice.

Note:

To simplify the table, channel nuts with springs only shown with the exception of P3016. Unistrut nuts without springs will have identical performance.

Figures marked with (*) in the table opposite were obtained using high strength (Grade 8.8) screws.

Figures not marked with (*) were obtained using standard strength (Grade 4.6) screws. It should be noted that unless otherwise specified, standard strength screws (Grade 4.6) are supplied.

For Slip Loads using 4.6 Grade Commercial bolts and screws, Contact your local Unistrut Service Centre.

Hot Dipped Galvanised Channel Nuts

- Apply Pullout Loads as listed
- For Slip Loads - refer to your local Unistrut Service Centre.

Note: Stainless steel grade 316 screws, nuts and channel used to determine loads.

These figures are results obtained from a comprehensive series of tests carried out by a NATA registered laboratory.

For further technical information please contact your nearest Unistrut Service Centre.

Slip & Pullout Performance - Stainless Steel

Channel Type	Nut Type	Pullout (kN)	Slip (kN)	Torque (Nm)
P1000SS	P1006SS	5.7	0.4	3.5
	P1007SS	8.2	0.5	8.5
	P1008SS	11.6	1.0	17.0
	P1013SS	12.1	1.2	30.0

Slip & Pullout Performance - Alum. Load Data

Approximate beam load capacities for channel sections may be obtained from the engineering data sections in this catalogue. Multiply data by the percentage in the table below.

Nut pullout strength and resistance to slip for sections may be obtained from the engineering data sections in this catalogue. Multiply data by the percentages in the table below.

Material	Load Percentage Factor	Slip Percentage Factor	Pullout Percentage Factor
Extruded Aluminium	33%	75%	50%

Note: Some fittings, as shown in this catalogue can be supplied in Aluminium on special order.

Safe Bearing Loads

$$M_1 = \frac{Pab^2}{L^2}$$

$$M_2 = \frac{Pa^2b}{L^2}$$

R - Reaction
M - Moment (Nmm)
P - Concentrated load (N)

W - Total uniform load (N)
V - Shear
L - Length (mm)

Δ - Deflection (mm)
E - Modulus of Elasticity (MPa)
I - Moment of Inertia (mm⁴)

Conversion Factors for Beams with various Static Loading Conditions

Load tables in this catalogue for 41mm channel width series and 32mm channel width series are for single span beams supported at the ends. These can be used in the majority of cases. There are times when it is necessary to know what happens with other loading and support conditions. Some common arrangements are shown in Table 1. Simply multiply the loads from the Beam Load Tables by the load factors given in Table 1. Similarly, multiply the deflections from the Beam Load Tables by the deflection factor given in Table 1.

Table 1

Load and Support Condition		Load Factor	Deflection Factor
1	Simple Beam - Uniform Load	1.00	1.00
2	Simple Beam Concentrated Load at Centre	0.50	0.80
3	Simple Beam -Two Equal Concentrated Loads at 1/4 Points	1.00	1.10
4	Beam Fixed at Both Ends - Uniform Load	1.50	0.30
5	Beam Fixed at Both Ends - Concentrated Load at Centre	1.00	0.40
6	Cantilever Beam - Uniform Load	0.25	2.40
7	Cantilever Beam - Concentrated Load at End	0.12	3.20
8	Continuous Beam - Two Equal Spans - Uniform Load on One Span	1.30	0.92
9	Continuous Beam - Two Equal Spans - Uniform Load on Both Ends	1.00	0.42
10	Continuous Beam - Two Equal Spans - Concentrated Load at Centre of One Span	0.62	0.71
11	Continuous Beam - Two Equal Spans - Concentrated Load at Centre of Both Spans	0.67	0.48

Unistrut Column Loading

The strength of axially loaded columns or compression members is, in part, dependent on the end conditions, that is, the degree of end fixity or restraint. A column with both ends fixed will support more load than one with both ends free or pin-ended.

Column loads published for UNISTRUT sections in this catalogue are offered as a guide and assume a partially fixed end condition as usually found in flat ended columns that are laterally tied and braced, i.e. $K = 1.0$.

Assumed K values (effective length factors) for columns with varying end restraints are as follows:

End Condition Code

-  Rotation fixed and translation fixed
-  Rotation free and translation fixed
-  Rotation fixed and translation free

HOW TO USE LOAD TABLES

Unistrut Sections as Beams

The load capacity of Unistrut members acting as a horizontal beam, between two vertical Unistrut members acting as columns, is governed by:

- the nature of the load.
- the particular section to be used.
- the span of the beam.
- the beam-load capacity of the section for a given span.
- the load capacity of the connectors used to support the beams on the columns.
- the load limitations, if any, resulting from special deflection considerations.

If items a), b) and c) are known, the load capacity is the smallest value of d), e), and f) as read or derived from the listed values in the appropriate tables.

Example 1

What is the uniformly distributed load capacity of a P1000 section used as a beam to span 500mm if P1026 connectors are used to support the beam?

Step 1

- Find beam load at maximum permissible stress.
- From P1000 Beam and Column in load table page 113, 500mm and Section P1000, $W = 7.42\text{kN}$.

Step 2

- Find load capacity of connectors.
- From Safe Bearing Loads in load table on page 119. for P1000 section supported on P1026 connectors; Support load = 4.75kN
Beam load = 2 x support load = 2 x 4.75 = 9.5kN.

Step 3

- Check deflection limitations.
- No special deflection considerations apply.

Step 4

- Select smallest load value from Step 1 to 3.
- Smallest value is 7.42kN.
- To convert to mass units divide by 0.0098, hence load capacity $W = 7.42 / 0.0098 = 757\text{kg}$ uniformly distributed.

Example 2

A beam of 250mm span is to carry a central point load of 4.45kN. Check if P1000 section is a satisfactory beam and if so, what type of connector should be used for supports and what is the resultant central deflection?

Step 1

- Convert point load to equivalent uniformly distributed load by multiplying by 2 (see note on point loads).
- Equivalent U.D.L. = $4.45 \times 2 = 8.9\text{kN}$.

Step 2

- Compare with beam load capacity for P1000 section spanning 250mm. From P1000 Beam and Columns in this Tab Section. Tabulated value = 14.83kN.
- Since this is greater than load to be applied, the P1000 section is satisfactory.

Step 3

- Determine support loads, which are each half the applied load. Support load = 2.23kN.

Step 4

- Select appropriate connector from Safe Bearing Loads in this Tab Section.
- Recommended load for P1026 supporting P1000 = 9.5kN.
- As the P1026 connectors exceed the required support load of 2.23kN, use P1026 connectors at each end.

Step 5

- Calculate central Deflection of beam from

$$\delta_2 = (W_2/W_1) \times (L_2/L_1)^3 \times \delta_1$$

(See P1000 Elements of Section, Page 113)

- From Beam load table for P1000 section with $L_1 = 250\text{mm}$, $W_1 = 14.83\text{kN}$ and $\delta_1 = 0.22\text{mm}$
- From example data and step 1 above $W_2 = 8.9\text{kN}$, $L_2 = 250\text{mm}$
- Substituting values in formula
 $\delta_2 = (8.9/14.83) \times (250/250)^3 \times 0.22 = 0.14\text{mm}$

As this is the value for the equivalent uniformly applied load a correction is necessary to account for a central point load. This is done by multiplying the uniform load deflection by 0.8 (see Notes to Tables). Hence deflection under applied point load:

$$= 0.14 \times 0.8 = 0.11\text{mm}.$$

HOW TO USE LOAD TABLES

Unistrut Sections as Columns

The load capacity of Unistrut Sections acting as columns depends on:

- the particular section used.
- the actual height of the column, measured between centres of connections to horizontal members.
- the location of the resultant axial load with respect to the centre of gravity, CG, of the section (i.e. the intersection of the XX and YY axes as shown on the section diagrams).
- the restraint to various kinds of movements of the column offered by the connections to horizontal members at various levels.

If a) and b) are known and if c) and d), for the case being considered, match the conditions in Structural Data Notes then the load capacity of the section can be read directly from the tables under 'maximum column load'.

It is emphasised that, for tabulated values to be used directly, the resultant load must be concentric (i.e. act through the C.G.) and connections at each end of a free column height must restrain those ends from both horizontal and torsional movement. If these conditions do not apply, reference should be made to the appropriate sections of AS/NZS 4600 since it is most likely that a smaller value than the listed one should be used.

Example 3

Island-type storage shelving is to be constructed using P1001 main posts (columns) at 1000 x 341mm centres. Shelves are to be at 500mm vertical spacing starting from the floor and connected to the posts so that concentric loading and translational and torsional restraint are provided at each level under full load conditions.

If the shelves are to carry packages of bolts stacked six high per shelf and the packages measure 75 x 75 x 100mm with a mass of 6.5kg each, what is the maximum height (number) of shelving that can be used?

Step 1

- Determine Concentric load for shelf.
- Plan area supported by each main column
 $= 1000 \times 150 = 150,000\text{mm}^2$
- This area can be packed with 20 packages
 $75 \times 100\text{mm}$ in plan i.e. 120 packages per shelf.

$$\begin{aligned}\text{Hence mass per shelf} &= 6.5 \times 120\text{kg} \\ \text{and load per shelf} &= 6.5 \times 120 \times 0.0098 \\ &= 7.64\text{kN per column.}\end{aligned}$$

Step 2

- Determine load capacity of P1001 section.
- From P1001 Beams and Columns Table on page 89 for P1001 with height 500mm.
- Maximum column load = 94.09kN.

Step 3

- Determine number of shelves.
- Divide column load capacity by the load per shelf.
i.e. Number of shelves = $94.09 / 7.64 = 12.31$
- Hence maximum number of shelves = 12
i.e. max. height of shelving
 $= 12 \times 0.5 = 6.0$ metres.

Note : If the bottoms of the columns bear onto P1000 bearers, which in turn are fixed to the ground, the load capacity of the column would be determined by the Recommended Bearing Load, (refer to Safe Bearing Loads in this Tab Section) of 30.3 kN.

The number of shelves would then be given by: $30.3 / 7.64 = 3.96$
i.e. 3 shelves, totalling 1.5 metres high.

UNIFORM WORKING LOAD FOR SIMPLY SUPPORTED BEAMS

Note: (Ultimate divided by 1.5)

MAXIMUM WORKING COLUMN LOADS

Note: (Ultimate divided by 1.5)

P2024 Series Pipe Clamps [ZP]

Also available in Hot Dipped Galvanised Finish.

Note: When used in the application illustrated it is recommended that the lower clamp be supported against possible slippage. Where P2024 series clamps are restraining pipework subject to vibration, the use of P2600 Uni-cushion is recommended.

FL210D	2.4	8	22	45	40	22	19	22	11	10	50	VdS/FM
FL312D	3.1	8	22	50	46	25	23	28	13	10	50	VdS/FM
FL412D	3.1	8	22	50	46	25	23	28	13	10	50	VdS/FM

The simplest, quickest and most cost-effective method of suspending building services from steel beams and suitable for use with parallel or tapered flange beams, the FL can be supplied with the back hole drilled to accept threaded rod. The FL uses a grade 8.8 cup point setscrew to provide a maximum bite into steelwork and maximum load performance.

Z10 - Z Purlin Clamp [GB]

Fixpoints

Part No.	 /100	
Z10	0.085	100

4029706 – Webfix Bolt Side Hanger

The one piece side hanging Webfix Bolt Side Hanger is attached through the side (web) of the purlin and ensures that the hanging tension load is transferred through the web and not onto the purlin lip.

The 10mm internal thread easily accommodates the matching diameter threaded rod and can be used to support cable tray.

Size: 1/4"-20 X 25 With Nuts
